

Using AutoConnect Arrows

When adding new shapes into a stencil, it is important that they appear relative (evenly spaced and neatly placed) to the other shapes that are being used.

One way to accomplish this is to use the **AutoConnect Arrows** tool.

1. First, locate and select the **AutoConnect** button in the top toolbar.
2. In the stencil, position the mouse arrow over the shape you want to connect to. Depending on where you want the new shape to connect, select one of the blue **AutoConnect** arrows.

3. A new shape is now positioned neatly in your stencil relative to your original shape (see two examples below).
