

Adding Text to Your Diagram

There are many places you can add text to your Microsoft Visio 2007 diagram. Text can be used to label the shapes in your diagram to better define the meaning behind them. The lines between the shapes, also known as connectors, can be labeled too.

The following are examples of how to add text to your next diagram.

Adding text to label a shape:

1. Double click on the shape you want to label. The insertion point will appear and you can then insert your text as shown below.

Adding text to your connectors:

1. Double click on the connector line you want to label. The insertion point will appear and you can then insert your text as shown below.
